

SNAPPASS

PRIVACY-FIRST
USER-CENTRIC BIOMETRIC AUTHENTICATION

What is SNAPPASS?

SNAPPASS is the 2FA identity verification solution of the future.

Access cards can be stolen, duplicated, or shared, but when paired with facial recognition, fraud becomes nearly impossible.

Why facial recognition?

Facial recognition is familiar and convenient, but comes with privacy risks.

SNAPPASS encrypts biometric data exclusively onto a SNAPPIN card, keeping personal information offline and giving users full control.

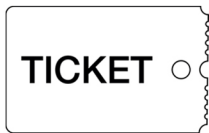

YOU CAN ACCESS ONLY

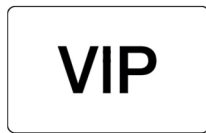

SNAPPIN

Authentication CARD

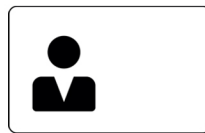

AI Optimized Compression
Military-Grade Encryption
Can't be Hacked or Modified
Personal Data Protection
Offline (Cold) Storage

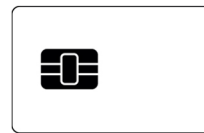

TICKET
